

415.1 Special Definitions.

Antenna - A device of forty-five (45) or more feet in height used to collect or transmit telecommunications or radio signals. Examples are: panels, microwave dishes, and single pole known as whips. This definition is not meant to include home television or amateur radio apparatus.

Telecommunications Facility - Consists of the equipment and structures involved in receiving or transmitting telecommunication or radio signals, but limited to those facilities with respect to which the State and Federal governments have not, under public utility laws, strictly pre-empted the Township from regulating.

Telecommunications Equipment Building - The building in which the electronic receiving and relay equipment for a telecommunications facility is housed.

Tower - A structure that is intended to support equipment used to transmit and/or receive telecommunications signals. Examples of such structures includes monopoles and lattice construction steel structures.
